

EMERGENCY CONTRACEPTION

Was no contraceptive used during sexual intercourse?

Was the sexual intercourse unplanned?

Did the condom break or slip during sexual intercourse?

Did you miss taking your oral contraceptive pills?

Did you miss your last contraceptive injection?

Did the IUD slip out?

If YES to any of these questions... your next step is to take Emergency Contraception immediately

Emergency Contraceptive Pills (EC Pills)

EC Pills prevent pregnancy BUT do not cause abortion.

- Can be used to prevent pregnancy after unprotected intercourse.
- Most effective if taken within 72 hrs after unprotected intercourse.
- It is not a regular method of contraception.
- Does not protect against STIs.

If you are sexually active, follow use of regular contraception.

Copper Intrauterine Device (IUD) as Emergency Contraception

- Cu-IUD is to be inserted in uterus within 5 days after unprotected intercourse.
- It provides both emergency and long term contraception.

Cu-IUD does not affect fertility & can be removed anytime.

Emergency Contraceptive Pills are available in government health facilities, FPA India clinics and over the counter pharmacy. It does not require any prescription from a doctor.

Please contact FPA India staff for more information.
